Editorial

- Create a list, seqList, of N empty sequences, where each sequence is indexed from 0 to N 1. The elements within each of the N sequences also use 0-indexing.
- Create an integer, lastAnswer, and initialize it to 0.
- The 2 types of queries that can be performed on your list of sequences (seqList) are described below:
 - 1. Query: 1 x y
 - 1. Find the sequence, seq, at index $((x \oplus lastAnswer) \% N)$ in seqList.
 - 2. Append integer y to sequence seq.
 - 2. Query: 2 x y
 - 1. Find the sequence, seq, at index ($(x \oplus lastAnswer) \% N$) in seqList.
 - 2. Find the value of element y % size in seq (where size is the size of seq) and assign it to lastAnswer.
 - 3. Print the new value of *lastAnswer* on a new line

Task

Given N, Q, and Q queries, execute each query.

Note:
— is the bitwise XOR operation, which corresponds to the ^ operator in most languages. Learn more about it on Wikipedia.

Input Format

The first line contains two space-separated integers, N (the number of sequences) and Q (the number of queries), respectively. Each of the Q subsequent lines contains a query in the format defined above.

Constraints

- $1 \le N, Q \le 10^5$
- $0 \le x \le 10^9$
- $0 \le y \le 10^9$
- It is guaranteed that query type 2 will never query an empty sequence or index.

Output Format

For each type **2** query, print the updated value of *lastAnswer* on a new line.

Sample Input

- 2 5
- 1 0 !
- 1 1 7 1 0 3
- 2 1 0
- 2 1 1

```
Sample Output
```

7

Explanation

```
Initial Values:
```

$$N = 2$$

lastAnswer=0

$$S_0 = []$$

$$S_1 = []$$

Query 0: Append 5 to sequence ($(0 \oplus 0) \% 2$) = 0.

lastAnswer=0

$$S_0 = [5]$$

$$S_1 = []$$

Query 1: Append 7 to sequence $((1 \oplus 0) \% 2) = 1$.

$$S_0 = [5]$$

$$S_1 = [7]$$

Query 2: Append ${\bf 3}$ to sequence (${\bf (0\oplus 0)\ \%\ 2}$) = ${\bf 0}$.

lastAnswer = 0

$$S_0 = [5, 3]$$

$$S_1 = [7]$$

Query 3: Assign the value at index 0 of sequence $((1 \oplus 0) \% 2) = 1$ to lastAnswer, print lastAnswer.

lastAnswer=7

$$S_0 = [5, 3]$$

$$S_1 = [7]$$

7

Query 4: Assign the value at index 1 of sequence $((1 \oplus 7) \% 2) = 0$ to lastAnswer, print lastAnswer.

lastAnswer=3

$$S_0 = [5, 3]$$

$$S_1 = [7]$$
